Neuropsychiatric Forum - diseases of the brain under one roof.

Neuropsychiatric Forum (NPF) is a professional society whose primary mission is the development of neuropsychiatry, a discipline that is trying to provide a comprehensive perspective on the brain research and brain diseases. The society is open to specialists of various disciplines of neuroscience, such as neurologists, neurosurgeons, psychiatrists, psychologists and scientists in the basic research. NPF aims to: support effective communication and interdisciplinary collaboration; develop education schemes and research projects; organize conferences and seminars; and run a portal devoted to neuropsychiatry (www.npforum.cz). In addition to these activities, NPF wants to improve the coverage of neuropsychiatry in the media, enhance the communication between neuropsychiatry experts and the public and ultimately improve the professional patient care.
